

UDservices**Five Types of Services**

- + Consulting
- + Studies
- + Integration
- + Demos & Trials
- + Training

UDcast provides products for building end-to-end IP solutions based on broadcast infrastructures such as satellite and digital TV. UDcast, using technologies fully mastered by its R&D, hides the peculiarities of the broadcast infrastructures to the traditional IP world, hence enabling you to deliver the IP services expected by your customers.

The Uniqueness of the UDcast Services

- + Bringing internationally recognized operational expertise
- + Matching the technology to market needs through a pragmatic approach
- + Focusing on today's operational solutions while paving the way for tomorrow's technologies
- + Bundling services, technologies, and products
- + A step-by-step approach, tuned to your time constraints and tailored to your budget

Being a leader in the convergence of IP and broadcast medias, UDcast provides products and solutions to its partners worldwide - new entrants and prestigious ones alike. Beyond software and appliances, and through a complete portfolio of services, UDcast stands by your side, accompanying you throughout your project lifecycle.

Who is it for?

The UDcast services appeals as much to broadcasting experts looking to evolve towards a full-IP environment as it does to the IP experts wishing to understand the intricacies of broadcast medias. Whether you are an OEM, a satellite operator, an integrator, or a value-added solution provider, our services are tailored to your team's profile and to your specific needs.

The UDcast services best suit two types of professionals: lead engineers and project managers seeking technology expertise. Furthermore, there are services are targeted at executives, decision makers, designers of managed services, or institutional/governmental IT directors.

UDservices

02 Five Types of Services

+Consulting

- . IP-DVB technologies, dynamic multicast and asymmetrical routing
- . IP-DVB system studies
- . Solutions architectures and optimization
- . Assistance in the launching of managed IP services customized for broadcast medias

+Studies

- . Managed IP services over satellite links
- . Bridging the digital divide and offering alternative IP network access solutions
- . Datacasting solutions
- . Interactive distribution services
- . Robust mobility solutions

+Integration

- . Adapting UDcast technology to the OEM environment (R&D tailored to your core technologies and specific drivers)
- . Contributing strong value-add through the integration and optimization of UDcast software products tuned for your needs, infrastructure, and solution
- . Integrating UDcast appliances to your environment, resulting in complete turnkey solutions (IP addressing, dynamic routing, integration to the operator's specific environment, assisting in the integration to proprietary environments)

+Demos & Trials

- . Turnkey demo systems for DVB-T hot spots, resilient mobility, and end-to-end solutions, mixing access modes and traffic aggregation
- . Setting up Internet access trials (e.g., for digital divide solutions)

+Training

- . Technologies, products, and solutions
- . In-house training facilities providing access to core technologies and demo platforms
- . Customized training at your premises

03 Technology & Expertise

UDcast delivers its services in a mixed-mode environment, teaming up your dedicated resources with our R&D staff, and assigning our experts to your project's specific needs. The combination of staff proximity and adequate expert coaching guarantees a high standard Service, tailored to your needs.

Our services are managed in a project mode by a specialized team. A single project management interface, designated for the lifetime of the project, is responsible for timely deliveries and successful project completion.
